# PROJECT ACTIVITY AND RISK PLANNING

# Ishikawa Diagram

# Pairwise Comparison

- Pairwise comparison is one of the methods used for prioritization.
- In a Team setup, Points are calculated for prioritized items by voting from the team members.
- The team would prioritize the projects, issues based on the points each item obtained.

## INSTRUCTIONS:

Label each item A through F below with a name or description of the problem, risk, etc. to be compared

- A = Changing requirements and specifications (2)
- B = Repeated turnovers of management (4)
- C = Unrealistic time frame (3)
- D = Technology Incompetence (6)
- E = Lack of trained management (5)
- F = Budget constraint (1)

Now compare each item to one other item using the table below:

- Discuss each pair among all team members -- e.g., A vs. B, A vs. C, etc.
- Once a consensus is reached, put the letter of the more important item in the cell.
- In the Sum Total column, tally the number of times the letter for that row was selected.
- In the Rank column, indicate each letter's rank based on its sum total.

	A	B	C	D	E	F	Sum Total	Rank
A							4	2
B	A						2	3
C	A	B					2	3
D	A	B	C				1	5
E	A	E	C	D			1	5
F	F	F	F	F	F		5	1
